

Connecting to the Wireless Network

NOTE: This guide is for Windows XP users who are using Windows wireless connection software.

- 1) Plug in or turn on the wireless card.
- 2) If you automatically connect to the network then you are done. If it does not then proceed to step 3.
- 3) Go to “Network Connections” in the “Control Panel.”
 - a. Start
 - b. Control Panel
 - c. Network and Internet Connections
 - d. Network connections
- 4) You should see an icon that says “Wireless Network Connection.” (It might say something slightly different.)
- 5) Right click on this icon and select “View Available Wireless Networks” from the drop down menu that appears.
- 6) On the right hand side you should see a “CLEVNET” connection. Click this box once, and then click “Connect” in the bottom right.
- 7) A new window will appear. Click “Connect Anyway,” or Cancel if you disagree.
- 8) If you clicked “Connect Anyway” you should be connected to the wireless network.
